1. Write a C Program that computes the real roots of a quadratic function. Your program should begin by prompting the user for the values of a, b and c. Then it should display a message indicating the nature of real roots, along with the values of the real roots (if any).

```
#include<stdio.h>
#include<math.h>
int main()
{
   float a,b,c,dis,root1,root2;
   printf("Enter coefficient of x2 :");
   scanf("%f",&a);
   printf("Enter the coefficient of x : ");
   scanf("%f",&b);
   printf("Enter the value of constant :");
   scanf("%f",&c);
   root1=((-b)+pow((b*b)-(4*a*c),0.5))/(2*a);
   root2=((-b)-pow((b*b)-(4*a*c),0.5))/(2*a);
   printf("The roots of the quadratic equation is : %f and %f ",root1,root2);
   dis=(b*b)-(4*a*c);
   if(dis<0){
         printf("\nThe roots are imaginary");}
   else if(dis>0){
         printf("\nThe roots are real");}
   else if(root1==root2){
         printf("\nThe roots are equal");}
return 0;
}
```

2. Write a C Program to input percentage of marks and display grade according to following:

Percentage &>= 90% : Grade A

Percentage &>= 80% : Grade B

Percentage &>= 70% : Grade C

Percentage &>= 60% : Grade D

Percentage &>= 40% : Grade E

Percentage &> 40% : Grade F

```
#include<stdio.h>
int main()
{
int marks;
printf("Enter the marks :");
scanf("%d",&marks);
if(marks>=90 && marks<=100){
        printf("Grade A");}
else if(marks>=80 && marks<90){
        printf("Grade B");}
else if(marks>=70 && marks<60){
        printf("Grade C");}
else if(marks>=60 && marks<40){
        printf("Grade D");}
else if(marks<40 && marks>0){
        printf("Grade F");}
else{
        printf("Invalid number");}
return 0;
}
```

3. Write a C Program to Add, Subtract, Multiply or Divide Using switch...case (menu driven).

```
#include<stdio.h>
```

```
int main()
{
int c;
int num1,num2;
printf("Enter value of first number:");
scanf("%d",&num1);
printf("Enter the value of second number :");
scanf("%d",&num2);
printf("\nEnter*1* for addition,*2* for subtraction,*3* for multiplication,*4* for division");
printf("\nEnter the operation to be done :");
scanf("%d",&c);
switch(c)
{
case 1:
printf("You have chosen to add two numbers ");
printf("\nThe addition of two numbers is %d",num1+num2);
break;
case 2:
printf(" You ahve chosen to subtract two numbers ");
printf("\nThe difference of two numbers is %d",num1-num2);
break;
case 3:
printf(" You have chosen to multiply two numbers");
printf("\n The product of two numbers is %d",num1*num2);
break;
case 4:
printf(" You have chosen to divide two numbers");
printf("\nThe division of two numbers is %d",num1/num2);
break;
default:
printf("\nEnter appropriate number for operation");
```

```
}
return 0;
}
```

4. Write a C Program to find the largest of three numbers using a conditional operator.

```
#include<stdio.h>
int main()
{
int a,b,c,largest;
printf("Enter the first number:");
scanf("%d",&a);
printf("Enter the second number:");
scanf("%d",&b);
printf("Enter the third number:");
scanf("%d",&c);
largest=(a>b)?(a>c?a:c):(b>c?b:c);
printf("The largest number among all the numbers is %d",largest);
return 0;
}
```

5. Write a C Program to Check Whether a Character is Vowel or not using switch case.

```
#include<stdio.h>
int main()
{
char ch;
printf("\n Enter a character to check whether it is vowel or consonant :");
scanf("%c",&ch);
switch(ch)
{
case 'A':
```

```
case 'a':
printf("\n %c is a vowel",ch);
break;
case 'E':
case 'e':
printf("\n %c is a vowel",ch);
break;
case 'I':
case 'i':
printf("\n %c is a vowel",ch);
break;
case 'O':
case 'o':
printf("\n %c is a vowel",ch);
break;
case 'U':
case 'u':
printf("\n %c is a vowel",ch);
break;
default:
printf("\n %c is not a vowel",ch);
}
return 0;
}
```

6. Write a C Program to calculate factorial of a number.

```
#include<stdio.h>
int main()
{
int num,i,factorial=1;
printf("Enter a number to find the factorial :");
scanf("%d",&num);
```

```
for(i=1;i<=num;i++)
{
factorial*=i;
}
printf("The factorial of the number %d is %d",num,factorial);
return 0;
}
```

7. Write a C Program to check if the number given by the user is prime or not.

```
#include <stdio.h>
int main() {
int num,i,result=0;
printf("Enter a number to check whether it is prime number or not: ");
scanf("%d",&num);
for(i=2;i<=num/2;++i){
if (num % i == 0) {
result= 1;
break;
}
}
if (num == 1) {
   printf("It is a composite number");
}
else {
if (result == 0)
printf("%d is a prime number.", num);
else
printf("%d is not a prime number.", num);
}

return 0;
}
```

8. WAP to print the following structure

*****

******

****

*** * * ***

```
#include<stdio.h>
int main()
{
int i,j;
for(i=1;i<5;i++)
{
for(j=1;j<=i;j++){
printf("*");
}
printf("\n");
}
return 0;
}
```

9. Write a C Program to print the following structure

1

1 2

1 2 3

1 2 3 4

```
#include<stdio.h>
int main()
{
int i,j,k,n=5;
for(i=1;i<=n;i++)
{
```

```
for(j=n;j>=i;j--)
{
printf(" ");
}
for(k=1;k<=i;k++)
{
printf("%d",k);
}
printf("\n");
}
return 0;
}
```

10. Write a C Program to Display Fibonacci Series

```
#include<stdio.h>
int fibo(int);

int main()
{
int num,i=0,result;
printf("Enter the number for which fibonacci's should be given :");
scanf("%d", &num);
for(i=0; i<num; ++i)
{
        result= fibo(i);
        printf("%d\t", result);
}
return 0;
}
int fibo(int a)
{
if(a==0)
```

```
        {
        return 0;
        }
else if(a==1)
        {
        return 1;
        }
else
        {
        return ( fibo(a-1) + fibo(a-2));
        }
}
```

11. Write a C Program to calculate Sum & Average of an Array.

```
#include<stdio.h>
int main()
{
int arr[1000],num,sum=0,i,j;
float avg;
printf("Enter the number of elements to be in the array :");
scanf("%d",&num);
for(i=0;i<num;i++)
{
printf("Enter the number :");
scanf("%d",&arr[i]);
}
printf("The array is...");
for(i=0;i<num;i++)
{
printf("%d  ",arr[i]);
}
for(j=0;j<num;j++)
```

```
{
sum+=arr[j];
}
avg=sum/num;
printf("\nThe sum of the numbers is %d",sum);
printf("\nThe average of the numbers is %.2lf",avg);
return 0;
}
```

12. Write a C Program to Find the Largest number in a given Array and its index.

```
#include<stdio.h>
int main()
{
int n,arr[50],largest,i,index;
printf("Enter the number of elements to be entered in array :");
scanf("%d",&n);
for(i=0;i<n;i++){
        printf("Enter the number of position %d :",i);
        scanf("%d",&arr[i]);
        }
largest=arr[0];
for(i=0;i<n;i++){
        if(arr[i]>largest){
                largest=arr[i];
                index=i;
                }}
printf("The largest number in array is %d ",largest);
printf("\nThe index of %d is %d ",largest,index);
return 0;
}
```

13. Write a C Program to search for a number in the one dimensional array using a

linear search algorithm.

```
#include<stdio.h>
int main()
{
int arr[1000],i,num,find,result=0;
printf("Enter the number of elements :");
scanf("%d",&num);
for(i=0;i<num;i++)
{
printf("Enter the number :");
scanf("%d",&arr[i]);
}
printf("Enter the number to be found :");
scanf("%d",&find);
for(i=0;i<num;i++)
{
        if(arr[i]==find)
        {
        printf("The number is found in the array");
        }
}
return 0;
}
```

14. Write a C Program for Binary search

```
#include <stdio.h>
int binarySearch(int array[], int find, int low, int high)
{
        while (low <= high)
        {
                int mid = low + (high - low) / 2;
```

```
                if (array[mid] == find)
                        return mid;

                if (array[mid] < find)
                        low = mid + 1;

                else
                        high = mid - 1;
        }

        return 12;
}

int main()
{
int arr[1000],num,find,result;
int i;
printf("Enter the number of elements to be in array:");
scanf("%d",&num);
for(i=0;i<num;i++)
{
printf("Enter the element :");
scanf("%d",&arr[i]);
}
printf("The array is...");
for(i=0;i<num;i++)
{
printf("%d  ",arr[i]);
}
printf("\n Enter the number needed to searched :");
scanf("%d",&find);
```

```
result = binarySearch(arr, find, 0, num - 1);
        if (result == 12)
                printf("Not found");
        else
                printf("Element is found at index %d", result);
        return 0;
}
```

15. Write a C Program to Sort the Array in an Ascending Order using Bubble sort.

```
#include<stdio.h>
int main()
{
int arr[1000],i,j,k,temp,num;
printf("Enter the number of elements to be in the array :");
scanf("%d",&num);
for(i=0;i<num;i++)
{
printf("Enter the element :");
scanf("%d",&arr[i]);
}
printf("The array is.....");
for(i=0;i<num;i++)
{
printf("%d  ",arr[i]);
}
for(i=0;i<num;i++)
{
for(j=0;j<num-i-1;j++)
{
if(arr[j]>arr[j+1])
{
temp=arr[j];
```

```
arr[j]=arr[j+1];
arr[j+1]=temp;
}
}
}
printf("The sorted array is...");
for(i=0;i<num;i++)
{
printf("%d  ",arr[i]);
}
return 0;
}
```

22. Write a C Program to find the sum of natural numbers using function.

```
#include <stdio.h>

int sum(int first, int last);
int main()
{
   int first, last, total;
   printf("Enter first limit: ");
   scanf("%d", &first);
   printf("Enter last limit: ");
   scanf("%d", &last);

   sum = sum (first, last);

   printf("Sum of natural numbers from %d to %d = %d", first, last, total);

   return 0;
}
```

```
int sum (int first, int last)
{
   if(first == last)
      return first;
   else
      return first + sum(first + 1, last); }
```

23. Write a C Program to find factorial of number using recursion.

```
#include<stdio.h>
int fact(int num);
int main() {
   int num;
   printf("Enter a integer: ");
   scanf("%d",&num);
   printf("Factorial of %d = %d", num, fact(num));
   return 0;
}

int fact(int num) {
   if (num>=1)
      return num*fact(num-1);
   else
      return 1;
}
```

24. Write a C Program to generate the Fibonacci series.

```
#include<stdio.h>
int fibo(int);
 int main(void)
{
   int a;
   printf("Enter the value of a: ");
   scanf("%d", &a);
```

```
   for(int num = 0; num < a; num++)
   {
      printf("%d ", fibo(num));
   }
   return 0;
}
 int fibo(int num)
{
   if(num == 0 || num == 1)
   {
      return num;
   }
   else
   {
      return fibo(num-1) + fibo(num-2);
   }
}
```

25. Write a C Program using structure for entering details of the five students as name, admission number, Date of birth, department and display all the details.

```
#include<stdio.h>
int main()
{
struct student
{
int roll_num; char name[86]; int fee;
char DOB[105];
};
struct student stu[90]; int a,b;
printf("\n Enter number of students");
```

```
scanf("%d",&a); for(b=0;b<a;b++)
{
printf("\nenter the roll number");
scanf("%d",&stu[b].roll_num);
 printf("\n ENTER THE NAME");
scanf("%s",&stu[b].name);
printf("\n ENTER THE FEE");
scanf("%d",&stu[b].fee);
printf("\n ENTER THE DOB");
 scanf("%s",&stu[b].DOB);
}
for(b=0;b<a;b++)
{
printf("\n Details of the student are %d",b+1);
printf("\n ROLL NO = %d",stu[b].roll_num);
 printf("\n NAME = %s",stu[b].name);
printf("\n FEE = %d",stu[b].fee);
 printf("\n DOB = %s",stu[b].DOB);
}}
```

26. Write a C program to find length of string using pointers.

```
#include<stdio.h>
int str_lne(char*);
void main()
{
char str[20]; int size;
printf("\n enter string : ");
gets(str);
size = str_len(str);
printf("string length %s is : %d", str, size);
}
```

```
int str_len(char*a)
{
int total = 0;
while (*a != '\0')
{
total++;
a++;
}
return total;
}
```

27. Write a C program to copy one string to another using pointers.

```
#include<stdio.h>
int main()
{
char str[90],copy_str[80];
char*pstr,*pcopy_str;
pstr=str;
pcopy_str=copy_str;
printf("\n enter the string");
gets(str);
while(*pstr!='\0')
{
*pcopy_str=*pstr;
pstr++,pcopy_str++;
}
*pcopy_str='\0';
printf("\n copied string is:");
pcopy_str= copy_str;
while(*pcopy_str!='\0')
{
```

```
printf("%c",*pcopy_str);
pcopy_str++;
}
}
```

28. Write a C program to compare two strings using pointers.

```
#include<stdio.h>
int main()
{
char string1[50],string2[60],*a,*b; int i,equal = 0;
printf("enter the first string: ");
scanf("%s",string1);
printf("enter the second string: ");
scanf("%s",string2);
a = string1;
b = string2;
while(*a == *b)
{
if ( *a == '\0' || *b == '\0' )
break;
a++;
b++;
}

if( *a == '\0' && *b == '\0' )
printf("\n\nentered strings are equal.");
else
printf("\n\nentered string are not equal");
}
```

29. Write a C program to find the reverse of a string recursively and non-recursively.

A)

```
#include <stdio.h>
#include <string.h>
void reverse_str(char*, int, int);
int main()
{
char str_arr[150]; printf("ENTER THE STRING:");
scanf("%s", &str_arr);
reverse_str(str_arr, 0, strlen(str_arr)-1);
printf("\nthe reversed string is: %s",str_arr); return 0;
}
void reverse_str(char *a, int start, int b)
{
char ch;
if (start >= b)
return;
ch = *(a+start);
*(a+start) = *(a+b);
*(a+b) = ch;
reverse_str(a, ++start, --b);
}
```

B)

```
#include <stdio.h>
#include <string.h>
int main()
{
char str[90],temp;
int a=0,b=0;
printf("\nEnter the string:");
gets(str);
```

```
b=strlen(str)-1;
while(a<b)
{
temp = str[b];
str[b]=str[a];
str[a]=temp;
a++;
b--;
}
printf("\n reversed string is: ");
puts(str);
}
```

30. Create a binary tree and output the data with 3 tree traversals

```
#include <stdio.h>
#include <stdlib.h>
struct node
{
int info;
struct node* left;
struct node* right;
};
struct node* newNode(int info)
{
struct node* node = (struct node*) malloc(sizeof(struct node));
node->info = info;
node->left = NULL;
node->right = NULL;
return(node);
}
void printPostorder(struct node* node)
```

```
{
if (node == NULL)
return;
printPostorder(node->left);
printPostorder(node->right);
printf("%d ", node->info);
}
void printInorder(struct node* node)
{
if (node == NULL) return;
printInorder(node->left);
printf("%d ", node->info);
printInorder(node->right);
}
void printPreorder(struct node* node)
{
if (node == NULL) return;
printf("%d ", node->info);
printPreorder(node->left);
printPreorder(node->right);
}
int main()
{
struct node *root = newNode(75);
root->left = newNode(126);
root->right = newNode(145);
root->left->left= newNode(63);
root->left->right= newNode(113);
printf("\nPre-order transversal of binary tree is \n");
printPreorder(root);
printf("\nIn-order transversal of binary tree is \n");
```

```
printInorder(root);
printf("\nPost-order transversal of binary tree is \n");
printPostorder(root);
getchar();
return 0;
}
```

31. Create a Binary Search Tree(BST) and search for a given value in BST.

33. Write a program to find All-to-all Shortest paths in a Graph.

Programs on Linked-list

34. Write a C program to implement the STACK operation using array as a data structure. Users must be given the following choices to perform relevant tasks.

a. Push an element on to the STACK.

b. Pop and element from the STACK.

c. Peek the STACK.

d. Display the STACK.

e. Exit the program.

```
#include<stdio.h>
#define MAX 50
int stack[MAX],choice , n , top ,x ,i;
void push(void);
void pop(void);
void display(void);
void peek(void);
int main()
{
top=-1;
printf("\n enter the size of stack:");
```

```
scanf("%d", &n);
printf("\n\t stack operations used in this array");
printf("\n\t        ");
printf("\n\t 1.PUSH\n\t 2.POP\n\t 3.DISPLAY\n\t 4.PEEK\n\t 5.EXIT");
do{
printf("\n enter the choice:");
scanf("%d",&choice); switch(choice)
{
case 1:
{
push();
break;
}
case 2:
{
pop();
break;
}
case 3:
{
display();
break;
}
case 4:
{
peek();
break;
}
case 5:
{
printf("\n\t exit ");
```

```
break;
}
default:
{
printf ("\n\t entered number is wrong");
}}}
while(choice!=5);
return 0;
}
void push()
{
if(top>=n-1)
{
printf("\n\t stack overflow");
}
else
{
printf("enter a number to be pushed:");
scanf("%d",&x); top++; stack[top]=x;
}
}
void pop()
{
if(top<=-1)
{
printf("\n\t stack is under flow");
}
else
{
printf("\n\t element which popped is %d",stack[top]);
top--;
```

```
}
}
void display()
{
if(top>=0)
{
printf("\n THE ELEMENTS IN STACK \n");
for(i=top; i>=0; i--)
printf("\n %d",stack[i]);
printf("\n next choice");
}
else
{
printf("\n empty stack");
}
}
void peek()
{
printf("\n peek element is %d",stack[top]);
}
```

35. Write a C program to reverse a string using STACK.

```
#include <stdio.h>
#include <string.h>
#define max 100
int top, stack[max];
void push(char x)
{
if(top == max-1)
{
printf("stack is overflow");
```

```
}
else
{
stack[++top]=x;
}
}
void pop()
{
printf("%c", stack[top--]);
}
main()
{
char str[50];
printf("string is : \n");
scanf("%s", &str);
int len = strlen(str);
int i;
for(i=0;i<len;i++)
push(str[i]);
for(i=0;i<len;i++)
pop();
}
```

36. Write a C program to convert the given infix expression to post-fix expression using STACK.

```
#include<stdio.h>
#include<string.h>
#define MAX 1000
char stack[MAX];
int top=-1;
void push(char a)
```

```
{
	if(top>=MAX-1)
		printf("Stack is full");
	else
	{
		top++;
		stack[top]=a;
	}
}
char pop()
{
	char a;
	a=stack[top];
	top--;
	return a;
}
int operator(char sign)
{
	if(sign=='^' || sign=='*' || sign=='/' || sign=='+' || sign=='-')
	return 1;
	else
	return 0;
}
int precedence(char sign)
{
	if(sign=='^')
	return 3;
	else if(sign=='*' || sign=='/')
	return 2;
	else if(sign=='+' || sign=='-')
	return 1;
```

```
        else
        return 0;

}
int main()
{
char infix[MAX],postfix[MAX],a,b;
int i=0,j=0;
printf("\n Enter arthmetic expression");
scanf("%s",infix);
while(infix[i]!=0)
{
        a=infix[i];
        if(a=='(')
        {
                push(a);
        }
        else if(a>='A' && a<='Z' || a>='a' && a<='z')
        {
                postfix[j]=a;
                j++;
        }
        else if(operator(a)==1)
        {
                b=pop();
                while(operator(a)==1 && precedence(b)>precedence(a))
                {
                        postfix[j]=b;
